

PAIN MYTHS & FACTS:

WHAT EVERYONE SHOULD KNOW ABOUT HOW PAIN WORKS

MYTH

Kids' pain experiences don't matter...they forget them anyway.

FACT

Wrong!
Our early pain experiences have long term impact. They change the way we experience pain and how we feel about healthcare into adulthood.

MYTH

Pain = how much damage there is to your body.

FACT

Nope... **MANY** things, including your thoughts, feelings, stress level, and what's going on in the world around you matter too.

MYTH

There is **nothing** we can do to prevent the freakout around needles for kids or adults.

FACT

Nope. There are simple, effective, research proven strategies that make needle pokes and other procedures a lot easier and more comfortable.

MYTH

Pain is the same for everyone.

FACT

Pain is **DIFFERENT** for everyone. It's even different for the same person, depending on what's going on in their world. It depends on **MANY** things, including past pain experiences, genetics, stress, mood, culture, etc.

MYTH

Needle anxiety is **rare**. I'm the **only one** I know who has it.

FACT

Unless you're a hermit who lives in the woods, this is **impossible**. **25%** of adults, **50%** of teens, and **63%** of kids are freaked out by needles... we just **don't talk about it** enough (yet!)

MYTH

People who are scared of needles just need to **suck it up**...it's no big deal.

FACT

It is a **REALLY BIG deal!** It's a fear that likely developed in childhood, is **VERY** common, and can have a major impact. People need skills and support...not shame.

MYTH

Medication is **always** the solution to pain.

FACT

While meds can often be useful, there are many **other** things that help too. Lowering stress, sleep, and other **self regulation** strategies can make a very big difference.

MYTH

If psychological techniques like **mindfulness** and **stress management** work for my pain, it means my pain **isn't real**.

FACT

NOOOOOOO! It means you're doing a **great job taking care of yourself** and that you understand pain is a biological, psychological, **AND** social experience. By changing our psychological state, we change our **VERY REAL** pain experience.

MYTH

I can't function or do **anything** until my pain is gone.

FACT

Unfun reality: Finding ways to get back to normal life and activities needs to happen **BEFORE** the pain goes away. It's about learning new **coping strategies**, new habits, and **changing the way you think about pain**.

MYTH

I am **always** going to feel as **bad** as I do right now.

FACT

Your brain and body are **always** changing, so **pain can change too**. With the right kind of intervention, there is great research evidence that **you can feel a whole lot better**.

MYTH

It's **O.K.** to hold my kid down for needle pokes.

FACT

Nope, nope, and NOPE. Research is clear that holding down kids (particularly on their backs) is a recipe for **medical trauma**. There are great **comfort positioning techniques** that allow for kids to be both safe and comforted.

MYTH

If I say **anything** about what works for me or my child for pain management, medical providers will be **mad and insulted** and might **not** want to care for me.

FACT

You and your medical team have the same goal... to create a **good healthcare experience** for you & your kiddo. Collaboration makes that happen. You combine their medical expertise **AND** your expertise in you and your child.
